BRAKE / FUEL LINE REPAIR CENTER
RÉPARATIONS DES CANALISATIONS DE FREINS ET DE CARBURANT

No. 022-550

THE EVOLUTION OF FUEL LINE REPAIR

Our 'No Tools Required' Fuel Line Repair system now enables the installer to utilize their most valuable tools: their hands.

A comprehensive application manual will be included with the Brake/Fuel Line Repair Center.

Features & Benefits

Innovative

'Posi-Hold' bead end design enables the installer to connect fittings by hand. No costly installation tools are required and the nylon tubing does not require pre-heating.

Connections

It meet or exceed the 200 p.s.i. rating of Nylon 12 tubing when used in conjunction with the appropriate size tubing and 360° seal clamps.

Replace

For the damaged sections, fabricate complete fuel lines, repair main feed, return and vent fuel lines in the time it takes to set up most installation tools.

POLY-V Coated Brake Lines

Included in the Brake/Fuel Line Repair Center, Papcoflex POLY-V coated brake lines feature a durable polyvinyl fluoride finish that resists corrosion and abrasions from road debris, offering up to 30 times the protection over our standard steel brake line.

To complement this premium brake line, all related brake line fittings, adaptors, unions, and bleeder screws will be offered in the Brake/Fuel line Repair Center providing one destination point for your customers. POP signage will also outline the correct size, thread type and the correct adaptors/unions for each brake line diameter.

Low Carbon Steel

- Proof Stress: 120,000 psi.
- Grade B identified by **three marks.**

The Conelok Locknut is an improved ONE-PIECE-REUSABLE-PREVAILING TORQUE locknut of superior locking characteristics which are obtained by accurately modifying the threads in the locking section.

Grade B Conelok Locknuts are all steel one piece construction. Lock in any position - are strong, shock-proof and vibration-proof. Easily installed and reusable - starts freely and then requires wrenching as the out-of-round gripping threads engage the bolt. Cadmium plated to resist rust and wax coated to ensure a uniform clamping force.

Medium Carbon Steel, Heat Treated

- Proof Stress: 150,000 psi.
- Grade 'C' identified by **six marks.**

Grade 'C' Heat Treated High-strength Conelok Locknuts are made for **critical applications,** used with heat treated high carbon and alloy steel bolts including S.A.E. Grade 8. The Cadmium finish resists rust and the pre-lubricant wax coating produces a uniform clamping force.

Two sectors of the Conelok Locknut are preformed inwardly. When the nut is applied to the bolt, these deflected threads are elastically returned to a circular form and create an inward and downward pressure which produces intimate contact between the load carrying flanks of the nut and bolt threads. The Conelok nut starts freely and then requires wrenching as the out-of-round gripping threads engage the bolt. The prevailing torque enables the stop nut to remain in a fixed position through a wide adjustment range and it retains its locking ability through many reuses.

Nylon Insert
These prevailing torque locknuts offer excellent vibration resistance and a wide range of adjustment. The nylon collar prevents liquid seepage and internal corrosion. It is smaller than the bolt diameter and as the bolt enters the collar, the thread form is impressed in the nylon. The resulting compressive forces exert constant friction grip on the bolt and prevent loosening. These nuts may be re-used up to 50 times because the "elastic memory" feature of the nylon causes it to return to its original shape. May be used with Grade 2 and Grade 5 Screws up to 250° F. Bright Zinc Chromate Plated.

FLANGE NUTS
ÉCROUS DE REBORD

118 Series

Papco® Flange Nuts provide better load distribution in fastening metal parts, wood or other soft materials. The flange bridges an oversize or elongated hole and eliminates the need for washers.

Two styles:

(A) Tensilock - one-piece, hardened, free running lock nuts have ratchet teeth in their base - bite into surface and hold tight under vibration.

(B) Standard - in regular and large flange (L) patterns.

SLOTTED SPRING PINS
GOUPILLES RESSORT FENDUE

300 Series

These high-carbon spring steel pins replace dowel pins, straight pins, taper and groove pins. They can be driven into an ordinary drilled hole and will hold position due to their spring action - no peening or riveting. Re-usable - easy to insert and remove. Shock resistant, vibration proof - stronger than solid pins. Spring pins are oversize, they contract when inserted in the nominal size drill hole.

INSULATED SOLDERLESS TYPE

Papco® Wiring Terminals are constructed from pure electrolytic copper, annealed and electro-tin plated. The one-piece construction provides a terminal of maximum strength and electrical conductivity. The electro-tin plating affords maximum protection against corrosion. Funnel barrel entry assures easy wire insertion and a positive, solid crimp. Insulation is colour coded for the appropriate wire gauge: Red 22-18, Blue 18-14 and Yellow 12-10.

PERMA-THREAD® HELICALLY COILED INSERTS

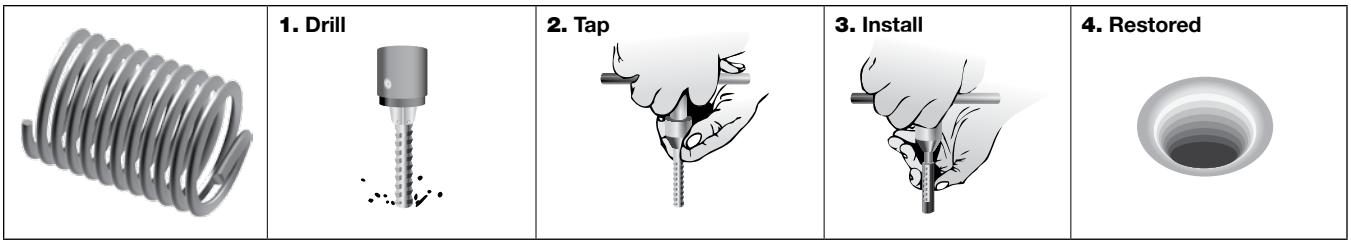

PERMA-PLUG SPARK PLUG REPAIR KIT

PERMA-THREAD® HELICALLY COILED INSERTS
INSERTIONS HÉLICOÏDAUX PERMA-THREAD®

Repair defective, stripped or damaged threads quickly and permanently. These inserts are made of diamond shaped stainless steel wire formed into a spiral screw thread coil.

They form a thread which is stronger than the original tapped material. The resilient quality of the insert allows it to adjust to eliminate stress concentration. The Perma-Thread® insert restores the hole to its initial size – a bolt or screw of the original size can be used for reassembly.

Full instructions for using the Perma-Thread® inserts are provided in each Repair Kit.

STEEL HYDRAULIC BRAKE LINES
TUBULURE DE FREIN HYDRAULIQUE

Papcoflex Steel Hydraulic Brake Lines are ideal replacement parts for hydraulic brake, transmission, gas, oil and vacuum lines used on all cars, trucks, buses and tractors.

1. **All Papco Brake Lines** feature a copper brazed, double-walled steel construction coupled with a zinc outer coating that provides resistance to rust, leakage, pressure and vibration.
2. Papco lines comply to GM123M-ASV and S.A.E. J527B, have wall thickness of 0.028" (0.70mm) and withstands pressures to 17,000 psi.
3. All Papco lines can easily be shaped by hand to duplicate the original without crimping or collapsing.

Papcoflex POLY-V Coated Brake Lines feature a polyvinyl flouride coating to resist corrosion, nicks and dents while providing up to 30 times the protection of standard steel brake lines.

Papcoflex Armoured Steel Brake Lines feature the highest degree of protection against common road hazzards. Each steel line is wound the entire length with a 0.046" diameter high carbon, galvanized wire and comes complete with flared fittings.

CUPRO-NICKEL **Tubing Brake Lines** are guaranteed for the life of the vehicle and afford the ultimate resistance to corrosion. Easiest to bend and flare. Guarantee is limited to the replacement of the product under normal wear and tear circumstances and the proper preparation (flaring) of the lines and installation.
