* MINIMUM Thread Length Formula:

For bolts 6" and shorter - twice the diameter plus 1/4" ($2D + 1/4"$).

Longer than 6" - twice the diameter plus 1/2" ($2D + 1/2"$).

When bolts are too short for formula thread length, thread will extend as close to head as practical.

* Note: Formula Thread Lengths are MINIMUM, actual thread lengths may be longer.

BRAD HOLE T-NUTS

Bare Metal

The combination 3 holes and 3 bosses allow this nut to be used in a wide variety of metal or plastic molding applications. Bosses allow it to be welded to metal or secured in plastic. Holes allow for plastic to flow through the part or may be used as anchoring points for rivets, nails, or screws to secure the part in wood applications.

TWO-WAY LOCK NUTS

UNC - Unified National Course Thread

Bright Zinc Plated & Lubricated

All metals for high temperature applications.

117 Plated

Two-Way locknuts consists of a hex nut with two rectangular indentations, compressed onto to flat sides of the nut opposite from each other. The compressions create slightly distorted center thread, resulting in a locking type action when the threads are engaged. This allows for a tight lock without being fully threaded onto its machine screw.

FLANGE NUTS

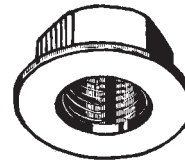

Bright Zinc Plated

118
Plated

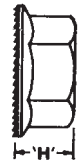

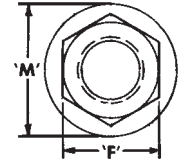

Flange nuts provide better load distribution in fastening metal parts, wood or other soft materials. The flange bridges an oversize or elongated hole and eliminates the need for washers.

EXPANDED METAL

Expanded Metal is sheet metal that has been slit and expanded up to 10 times its original width. No metal is wasted in the manufacturing process. The formation of the diamond truss pattern contributes to the metal's strength and rigidity. Expanded metal sizes (1/2" and 3/4") refers to the width of each diamond shape from top to bottom including the thickness of the metal at the bottom. They allow light and air to pass through, can be cut, formed, shaped and welded. Used as window guards, grating, partitions, protective covers, baskets and more.

Steel Rivet - Steel Mandrel

Fasten joints without access to reverse side. Insert rivets - the retracting jaws in the setting tool pull the mandrel head into the rivet body on the reverse side until the mandrel breaks. The high clinch action pulls the parts together for a tight, vibration-proof fastening.
